

SalesPro

Simple business software for sales, inventory, invoices, and purchasing.

Who It Fits

Small businesses and solo operators who sell products and need cleaner day-to-day operations.

Best for teams that want to replace spreadsheets with one practical system for orders, stock, and invoicing.

What It Solves

- Replace spreadsheets with one workflow

Keep customers, products, orders, inventory, and invoices in one place so you stop chasing updates across multiple files.

- Sell products and track stock clearly

See what you have on hand, what needs to be ordered, and what is ready to ship without guessing.

- Create invoices and collect payment faster

Send a clean invoice, give the customer an online payment link, and follow the balance without manual math.

- Handle purchase orders and receiving

Create purchase orders, receive products into stock, and keep purchasing tied to real inventory movement.

- Keep customers updated

Send shipment updates, share portal links, and give customers clear documents they can open on their own.

Implementation

1. SalesPro setup configures the workspace, branding, and customer portal for your business.
2. Products, customers, and opening inventory are imported from your current spreadsheets.
3. Your team starts using orders, invoices, purchasing, and shipment tracking in one place.

Pricing

Simple pricing based on setup needs, user count, and support level.

Request a demo to review your workflow, rollout scope, and support plan.
